Lessons and challenges in the aftermath of the Tohoku-Oki earthquake
Rob Graves, Junle Jiang, Lingsen Meng and Shenji Wei

Join us for a special discussion on the lessons and challenges at the aftermath of the Tohoku-Oki Earthquake. Our speakers will present us some preliminary results of the modeling of geodetic and seismological data.

Geophysical observations before, during and after the earthquake continue to challenge some of our ideas of how the earthquake cycle operates across the Japan trench and we will continue discussing the implications of the new modeling results as the story unravels.

Jean-Philippe Avouac will resume the conversation the following week (Tue 10/11/11) to present his views of the matter.
